

# Sustainable Lives – Sustainable Livelihoods = Green (Economic) Growth

*putting technology in perspective*

# Technology as a building block

## Quality of life issues

- people need homes, water, sanitation, energy...
  - *basic needs technologies and services*

## Economic growth

- people need jobs
  - *livelihood technologies and services*

# Technology as a building block for economic growth

## Technologies for maximizing economic gains -

- **Focus:**
  - **Small and marginal farmers**
  - **Small and medium enterprises**
  - **Villages and small towns**
  - **Youth and village communities**

# Technology as a building block for economic growth

## Technologies for maximizing economic gains -

- **Characteristics:**
  - **Decentralized management**
  - **Local resources**
  - **Infrastructure services**
  - **Leap frog technologies**

*Amenable for replication – at large scale*

# Technology as a building block for **GREEN** economic growth

- **Regeneration and maintenance of the natural capital – livelihood security and QOL security**
  - **Closing the loops – zero waste-waste to resources – ecosystem approach**
  - **Resource efficiency – resource substitution – resource recycling**
  - **Technology diversity**

# Pre-requisites

*if technology is to be a building block for green economic growth:*

- **Packaging technology solutions**
  - **Hardware** – equipment, production systems
  - **Software** – know-how, know why, communication, information
  - **Business models** – investments, revenues, market development, financing systems, information

# Pre-requisites

*if technology is to be a building block for green economic growth:*

- **Conditions for technology seeding and maturation**
  - **Project situations for technology development- testing-incubation-*productization***
  - **Programmatic approach for technology liberation**
  
- **Contextualizing technology solutions**
  - **Right scaling**
  - **Responding to stressed resource situations**

- **Thank You**
